

**Amendments to the Claims:**

Please amend the claims as follows:

Claim 1 (Currently amended): A medicament dispenser device for use in the delivery of a combination medicament product, the device comprising:

a first medicament container for containing a first medicament component;

a first release means for releasing the contents of said first medicament container;

at least one further medicament container for containing at least one further medicament component; and

at least one further release means for releasing the contents of each said at least one further medicament container;

wherein the first medicament component is kept separate from the at least one further medicament component until the point of release thereof for delivery in combination, and wherein the dispenser device additionally comprises:

at least one actuation indicator associated with the first medicament container and / or the at least one further medicament container.

Claim 2 (Original): A medicament dispenser device according to claim 1, wherein the device comprises only at least one further medicament dispenser.

Claim 3 (Currently amended): A medicament dispenser device according to ~~either of claims claim 1 or 2~~, wherein the at least one actuation indicator associates directly with the first medicament container and the at least one further medicament container.

Claim 4 (Currently amended): A medicament dispenser device according to ~~either of claims claim 1 or 2~~, wherein the at least one actuation indicator associates indirectly with the first medicament container and the at least one further medicament container.

Claim 5 (Currently amended): A medicament dispenser device according to ~~any of claims claim 1~~ [[to 4]], wherein a single actuation indicator associates with both the first medicament container and the at least one further medicament container.

Claim 6 (Currently amended): A medicament dispenser device according to ~~any of~~  
~~claims~~ claim 1 [[to 4]], wherein a single actuation indicator associates with the first  
medicament container only and the first medicament container and at least one further  
medicament container are coupled such that actuation of the first medicament  
container also results in actuation of the at least one further medicament container.

Claim 7 (Original): A medicament dispenser device according to claim 6, wherein the  
dispenser device comprises an actuator coupling that acts such as to couple an  
actuating movement of the first and the at least one further medicament container.

Claim 8 (Original): A medicament dispenser device according to claim 7, wherein  
said coupling actuator comprises a lever arranged to act on both the first and the at  
least one further medicament container to enable release of medicament therefrom.

Claim 9 (Original): A medicament dispenser device according to claim 6, wherein the  
dispenser device comprises fixing means for fixedly coupling the movement of the  
first and the at least one further medicament container together.

Claim 10 (Original): A medicament dispenser device according to claim 6, wherein  
the dispenser device comprises a meter coupling that acts such as to couple a metering  
movement relative to the first and the at least one further medicament container.

Claim 11 (Original): A medicament dispenser device according to claim 10, wherein  
the first and the at least one further medicament container each have bulk reservoir  
form and said metering movement is that of one or more metering means moveable  
relative to the first and the at least one further medicament container for metering  
medicament therefrom.

Claim 12 (Original): A medicament dispenser device according to claim 6, wherein  
the dispenser device comprises a dose advancement coupling that acts such as to

couple a dose advancement movement relative to the first and the at least one further medicament container.

Claim 13 (Original): A medicament dispenser device according to claim 12, wherein the first and the at least one further medicament container each comprise a pack carrying multiple individual doses of medicament and said dose advancement movement results in advancement of a next accessible dose of each pack.

Claim 14 (Original): A medicament dispenser device according to claim 6, wherein the dispenser device comprises a dose access coupling that acts such as to couple a dose access movement relative to the first and the at least one further medicament container.

Claim 15 (Original): A medicament dispenser device according to claim 14, wherein the first and the at least one further medicament container each comprise a pack carrying multiple individually accessible doses of medicament and said dose access movement enables access to a next accessible dose of each pack.

Claim 16 (Currently amended): A medicament dispenser device according to ~~any of claims~~ claim 6 ~~to 9~~, wherein the single actuation indicator is arranged to detect an actuation step relating to the first medicament container.

Claim 17 (Currently amended): A medicament dispenser device according to ~~any of claims~~ claim 6 ~~to 9~~, wherein the single actuation indicator is arranged to detect the release of medicament from one ~~(e.g. the first)~~ medicament container.

Claim 18 (Currently amended): A medicament dispenser device according to ~~any of claims~~ claim 10 ~~to 15~~, wherein the single actuation indicator is arranged to detect a pre-actuation step relating to the first medicament container.

Claim 19 (Currently amended): A medicament dispenser device according to ~~any of~~  
~~claims~~ claim 1 [[to 4]], wherein the first and the at least one further medicament  
container each have an actuation indicator associated therewith.

Claim 20 (Original): A medicament dispenser device according to claim 19, wherein  
each actuation indicator is arranged to detect an actuation step relating to each  
medicament container.

Claim 21 (Original): A medicament dispenser device according to claim 19, wherein  
each actuation indicator is arranged to detect a pre-actuation step relating to each  
medicament container.

Claim 22 (Original): A medicament dispenser device according to claim 19, wherein  
each actuation indicator is arranged to detect medicament release from each  
medicament container.

Claim 23 (Currently amended): A medicament dispenser device according to ~~any of~~  
~~claims~~ claim 1 ~~to 22~~, wherein the at least one actuation indicator comprises an  
actuation sensor.

Claim 24 (Original): A medicament dispenser device according to claim 23, wherein  
the actuation sensor senses a parameter selected from the group consisting of electro  
magnetic radiation, magnetic field, light, motion, temperature, pressure, sound,  
oxygen concentration, carbon dioxide concentration, moisture and any combinations  
thereof.

Claim 25 (Currently amended): A medicament dispenser device according to ~~any of~~  
~~claims~~ claim 1 [[to 24]], wherein the at least one actuation indicator comprises a  
release sensor for detecting medicament release from the first and / or at least one  
further medicament container.

Express Mail Label No.  
EV332145279US

Claim 26 (Currently amended): A medicament dispenser device according to ~~any of claims claim 1 to 25~~, wherein the actuation indicator comprises a visual display unit for display of dose count information.

Claim 27 (Currently amended): A medicament dispenser device according to ~~any of claims claim 1 to 26~~, wherein the device is in the form of an inhaler device.

Claim 28 (Original): A medicament dispenser according to claim 27, wherein the inhaler device is in the form of a device selected from the group consisting of a reservoir dry powder inhaler (RDPI), a multi-dose dry powder inhaler (MDPI), a metered dose inhaler (MDI), a liquid spray inhaler (LSI) and any hybrids thereof.

Claim 29 (Currently amended): A medicament dispenser according to ~~either of claims claim 27 or 28~~ comprising a single outlet for delivery of the combination medicament product to the respiratory tract of a patient.

Claim 30 (Currently amended): A medicament dispenser according to ~~any of claims claim 27 to 29~~, actuatable in response to an inward breath of a patient.

Claim 31 (Currently amended): A medicament dispenser according to ~~any one of claims claim 1 to 30~~, wherein the first medicament container contains a first medicament component and the at least one further medicament container contains at least one further medicament component.

Claim 32 (Original): A medicament dispenser according to claim 31, wherein said first medicament component comprises a bronchodilator and said at least one further medicament component comprises an anti-inflammatory.

Claim 33 (Original): A medicament dispenser according to claim 32, wherein said bronchodilator is a beta-agonist and said anti-inflammatory is a steroid.

Claim 34 (Original): A medicament dispenser according to claim 33, wherein said bronchodilator is selected from the group consisting of salbutamol, salmeterol, formoterol and any salts or solvates thereof and mixtures thereof.

Claim 35 (Currently amended): A medicament dispenser according to ~~either of claims~~ claim 33 ~~[[or 34]]~~, wherein said anti-inflammatory is selected from the group consisting of a beclomethasone ester, fluticasone ester, budesonide and any salt or solvates thereof and mixtures thereof.

Claim 36 (Canceled)

Claim 37 (New): A method of treating a respiratory disorder in a patient in need thereof comprising administering an effective amount of medicament suitable for treating said respiratory disorder to the patient by inhalation from a medicament dispenser according to claim 1.
